IBM, 2023 Cost of a Data Breach Report

The Scale of Threats

IDC Approach and Benefits

We offer solutions that help clients protect business assets and mature their security posture, while proactively detecting, responding and recovering from security events.

We operate around the clock to provide fully customizable, industry aligned managed security solutions including advanced security event monitoring, threat analytics, cyber threat management, and incident response for businesses to meet the increasing market demand in cybersecurity services.

IDC Security Strategies

Activate Telemetry and Monitoring

Leverage telemetry and active monitoring to gain visibility into threats and vulnerabilities.

Embrace Shared Intelligence

Stay informed about the threat landscape and utilize actionable intelligence from trusted sources.

Prioritize Risk-Based Context Analysis

Assess threat importance and prioritize security efforts based on risk context.

Assess Organizational Cyber Maturity

Identify gaps in the cyber perimeter, outlining roadmaps to facilitate implementation and optimization of security components.

Achieve Pervasive Defense

Implement security measures across your entire ecosystem using an integrated platform.

Orchestrate and Automate Responses

Automate security responses for faster recovery in case of incidents.

Empower Developers with Secured Applications

Conduct robust application security tests and educate developers on secure development operations.

Continuously Empower employee awareness

Facilitate technical and non-technical employee security awareness and upskill employees with cybersecurity trainings and certificates.

Strategies

Helping an Existing Bank become more Tech-Proof with Cybersecurity Solutions

sonarqube
imperva

The Objective

Upgrading core applications of security and service solutions for a major bank in India.

The Challenge

- Integration with large volume of third- party and core APIs with a total of 45 APIs.
- Secure automation and deployment of 30 microservices on multiple environments.
- Coordination with development teams across multiple geographies.
- Requirement of cybersecurity operational manpower.

The IDC Solution

Upgrading core applications of security and service solutions for a major bank in India.

- Web Application Firewalls
- DevSecOps framework
- Encryption of authentication information and payloads
- Continuous vulnerability assessment

Key Benefits

Application of best practice security solutions for the bank's compliance and cybersecurity needs.

Centralized management, Security Compliances and Cybersecurity risk mitigation.

Stress-free operation and management of bank's cybersecurity operation center with professional manpower and best practices.

Consulting and Advisory

We help executives develop a cyber risk program in line with the strategic objectives and risk appetite of the organization.

Managing cyber risk to grow and protect business value

The IDC CSF is a business-driven, threat-based approach to conducting cyber assessments based on an organization's specific business, threats, and capabilities. CSF incorporates a proven methodology to assess an organization's cyber resilience; content packs which enable us to conduct assessments against different standards.

CYBER STRATEGY FRAMEWORK (CSF)

Three fundamental drivers that drive growth and create cyber risks:

Innovation

Information sharing

Trusting people

CEO:
"I read about phishing in the news. Are we exposed?"

CIO:
"Where and how much do I need to invest to optimize my cyber capabilities?"

Board:
"What is our level of resilience against these cyberattacks?"

Organizations need a holistic, business-driven, and threat-based approach to manage cyber risks. While securing assets is important, being vigilant, and resilient in the face of cyberattacks is imperative.

Business risks

What is my risk appetite?

What is my business strategy?

What are my crown jewels?

Threat landscape

What are they interested in?

What tactics might they use?

Who are my adversaries?

Cyber capabilities

Governance
Identify top risks, align investments, develop an executive-led cyber risk program

Secure
Take a measured, risk-prioritized approach to defend against known and emerging threats

Vigilant
Develop situational awareness and threat intelligence to identify harmful behavior

Resilient
Have the ability to recover from and minimize the impact of cyber incidents

A strong cyber risk program helps drive growth, protects value, and helps executives to be on top of cyberthreats

Understand the business context and objectives

Understand my threat landscape

Understand current maturity level of cyber capabilities

Focus on the right priorities

Define target maturity level of cyber capabilities and recommendations

Develop cyber strategy roadmap

Enhance value from cyber security investments

Communicate with internal and external stakeholders

Cyber Strategy, Transformation, and Assessments

Challenges

Organizations increasingly depend on complex technology ecosystems for several key purposes: to interact in new ways with customers and third-parties; to use data to improve decision-making; and to increase reach and profitability.

As cyberattacks become more frequent and severe, board members and executives are seeing that technology-based initiatives open doors to cyber risks.

Key Solutions

Cyber Strategy, Roadmap, and Architecture

Advise | Implement

We define cyber strategies, actionable cyber roadmaps, and reference architectures in line with the findings of a maturity assessment.

Recommendations are based on a defined target state that is determined by the organization's threat exposure.

Cyber Transformation

Advise | Implement | Manage

We mobilize, manage, and deliver a structured and prioritized program of work to help organizations transform to improved cyber governance, security, vigilance, and resilience.

Cyber Maturity Assessments

Advise | Implement | Manage

Enables organizations to identify and understand their key business risks and cyberthreat exposures. This supports measurement of their cyber maturity, either using industry-standard frameworks.

Cyber Risk Quantification

Advise | Implement

Provides the information needed to make security investment decisions. IDC uses unique methods to quantify both the client's risk and the expected risk mitigation offered by IDC security investments

Cyber Risk Management and Compliance

Challenges

Understanding the status of an organization's security posture requires constant evaluation of evolving risks, security standards, and cyber regulations.

Today's complex and distributed IT landscape and third-party involvement means organizations must take a structured approach to understanding the road ahead.

Key Solutions

Cyber Risk Management

Advise | Implement

We define framework and methodologies to assess cyber risks for the organization to understand their magnitude and make informed decisions that align the organization's risk appetite with the risks it faces.

Cyber Risk Dashboarding

Advise | Implement | Manage

We design and implements risk dashboard constituents, including Key Risk Indicators (KRIs) and dashboards to facilitate effective monitoring of cyber risk from the boardroom to the network.

Cyber Insurance

Advise | Implement

Evaluates coverage of existing insurance policies. Determines areas where residual cyber risk could be transferred to an insurer.

Security Control Framework

Advise | Implement

We mobilizes, manages, and delivers a structured and prioritized program of work to help organizations transform to improved cyber governance, security, vigilance, and resilience.

Third-Party Risk Management

Advise | Implement

Customizes services at each step of the third-party cyber risk management lifecycle. Provides end-to-end oversight of the third-party risk management program.

Security and Regulatory Compliance

Advise | Implement

Assists and prepares compliance with national and/or sectoral cybersecurity regulations.

Cyber Education and Awareness

Challenges

Even with excellent people and technology in place, the organization's own employees are the weakest link when it comes to cybersecurity. The so-called insider threat is real. Building secure defenses against outside threats is not enough if data is leaked from within an organization.

Key Solutions

Insider Risk

Advise | Implement

We help organizations identify, monitor, and manage the main sources of insider threat. We help to establish Potential Risk Indicators (PRIs) and create awareness of the main indicators of maturity in managing insider risk.

Cyber Security Awareness Program

Advise | Implement | Manage

We understand the current state of a company's awareness level, defines a strategy, and develops a recognizable awareness campaign, multimedia content package, and communication tools.

Technical Cyber Training

Advise | Implement

We deliver both introductory and highly specialized technical training in cybersecurity, either on-site or through a purpose-built online platform. Our catalog of courses covers areas such as: Hacking, Secure Development, Forensics, Reversing, Industrial Control System (ICS) security, and Incident Response.

Perimeter and Identity Security

We focus on establishing effective controls around the organization's most sensitive assets and balancing the need to reduce risk, while enabling productivity, business growth, and cost optimization objectives.

Infrastructure Protection

Challenges

Hyper-connectivity is creating a new era for cyber infrastructure. Ever more connected devices pose new cybersecurity challenges for public and private-sector organizations as the volume of threats to their infrastructure rises.

Devices connected to corporate infrastructures need to continuously acquire, store, and use large amounts of data, a significant proportion of which will be sensitive. Protecting this data against cyberattack is of paramount importance.

Key Solutions

IoT Strategy, Roadmap, and Architecture

Advise | Implement | Manage

Reviews industrial and consumer product codes and delivers secure development practices to enhance clients' capabilities in implementing next-generation connected products. We help organizations undertake readiness assessments, align their IoT security vision with their overall mission and vision statements, build IoT roadmaps and adapt traditional governance models to new IoT developments.

Cloud Security

Advise | Implement | Manage

Evaluates client requirements, assesses cloud usage, builds the business case and cloud roadmaps, and assists with cloud vendor evaluation.

Network Strategy and Optimization

Advise

Analyzes client infrastructure to identify and remedy the configuration of network components and help clients design their network architecture into secure zones.

Vulnerability Management

Challenges

Businesses rely on a stable and secure IT environment as the foundation for driving new digital innovations, and products.

New security vulnerabilities are published daily, and hackers are constantly looking for ways to gain access to systems and data.

Identifying, managing, and correcting vulnerabilities in an environment that consists of multiple applications, systems, and locations is a significant management challenge

Key Solutions

Vulnerability Assessments

Implement | Manage

Uses known hacking methods and vulnerabilities, tests the security of applications and IT systems, and achieves increased levels of security. IDC can undertake this work fully on behalf of organizations or complement organization's internal vulnerability assessment team.

Tabletop Exercises

Manage

Hacking and Phishing as a service to provide regular insight into an organization's potential vulnerabilities. Many organizations perform security tests only once, while cyber criminals are constantly seeking to find and exploit new vulnerabilities.

Vulnerability Remediation Support

Implement | Manage

Configures and manages vulnerability management solutions providing insight into the business-relevant vulnerabilities that matter.

Application Protection

Challenges

Applications form a major part of every IT landscape. Ensuring they are protected requires secure design, implementation, and configuration. Testing of the protection requires robust processes, dedicated resources, and a skilled team.

Many organizations find setting up such processes and acquiring and maintaining the required skills and knowledge to be a major challenge.

Key Solutions

Enterprise Application Security

Advise | Implement | Manage

Assesses the current state of an organization's applications and the security controls on the application layers for enterprise systems.

Source Code Review

Manage | Implement

Analyzes application source code to test for common mistakes. The analysis can be conducted through one-off application assessments or as an integral part of an organization's software development process.

Secure by Design: Secure SDLC

Implement | Manage

We assess an organization's software development life cycle (SDLC) to determine if security is properly incorporated. In addition, we help organizations embed Secure by Design principles and controls.

Implementation and Deployment

Implement | Manage

Through our partnerships ImmuniWeb and Resecurity, we provide extensive application testing from source code to runtime levels, conducting manual and automated white, grey and black-box penetration tests through emulators.

Identity and Access Management

Challenges

The traditional network perimeter has faded. In response, organizations are increasingly focusing on user identity assurance and information access controls.

Identity and Access Management (IAM) provides tools, processes, and methods to enhance the security of online transactions while minimizing friction in the user experience. IAM also provides a trusted environment for omni-channel communication between users (customers, business partners, and employees) and IT platforms.

Key Solutions

Current State Assessments for IAM Components

Advise

Assesses the current maturity of IAM-related controls and pinpoints key improvement areas.

IAM Functionality Design and Preparation for Implementation

Advise | Implement

Formalizes requirements, designs a fitting solution landscape by selecting the most appropriate solution set, and transforms the organization and its ~~processes to optimize returns on IAM~~ investments.

IAM Platform Deployment

Implement

Makes the IAM vision a reality by implementing IAM solutions to support your IAM processes with key technology partners (SailPoint, OKTA, CyberArk, and ForgeRock).

Reach of IAM

Manage

Integrates business applications with the IAM platform to increase the reach of automated controls.

Identity and Access Management Components

Key Differentiators

- Business and user-centric view of IAM.
- Experience of global best practices and IAM solution architectures.
- Solution partner network with major IAM capability providers.

Information Privacy and Protection

Challenges

Organizations need to be able to use, analyze, and share their data while ensuring compliance with invasive regulatory control and customer/employee privacy expectations.

Greater reliance on effective data use, combined with increased regulation and control requirements, such as General Data Protection Regulation (GDPR), puts significant operational pressure on organizations.

This requires a holistic and integrated data privacy approach to an environment that is often highly segmented.

Organizations are expected to keep personal and corporate data confidential, yet data breaches still occur. These can result in financial loss, regulatory sanction, and reputation damage.

Common challenges are identifying organization's business critical information and ensuring it is adequately protected in a world where the quick exchange of information is integral to business success.

Key Solutions

Privacy/GDPR Maturity Assessments and Roadmap

Advise | Implement

Assesses and identifies the current state of an organization's GDPR readiness. This includes a prioritized and risk-based roadmap that clearly identifies actionable mitigating measures and short-term fixes.

Implementation and Deployment of Data Protection solutions

Implement | Manage

We leverage cutting-edge solutions such as Azure Information Protection and Galaxkey that ensure sensitive data remains secure at rest and in transit. We assist you to unlock the maximum capability for an efficient governance process which does not make securing your data a cumbersome task.

Threat Landscape Analytics

We integrate threat data, IT data, and business data to equip security teams with context-rich intelligence to proactively detect and manage cyberthreats and respond more effectively to cyber incidents.

IDC MANAGED SECURITY SERVICES

Security Information and Event Management

Real-time monitoring, correlation, and analysis of security events across enterprise assets. This includes:

Vulnerability Management

Managing the full vulnerability life cycle from identifying to managing execution of remediation, to reporting.

Implementation Services

Implementing and managing tools, technologies, and processes for risk-aligned controls development and operations support.

Onsite Security Operations

Deploying our experienced staff to work with you to enhance your current information security program, or to augment your staff where gaps might exist.

Security Tools Management

Managing anti-virus solutions, perimeter security tools, and other preventative and detective solutions.

24x7 logging, monitoring, and alerting

Advanced 24x7 security monitoring for early threat detection and mitigation. Through rapid detection, organizations can stop an attack before it impacts business services.

Customized to client-owned or wholly managed by IDC

Fully augmented-operation model that works with your current systems or is wholly owned and managed by us based on business needs. We right size our solution for your business.

Advanced Threat Readiness and Preparation

Challenges

Threat techniques evolve daily in volume, intensity, and complexity as hackers seek new vulnerabilities in software to compromise key systems across organizations.

Carrying out occasional, intermittent compliance-focused technical security assessments is not enough. Much more is required to understand if organizations can become compromised.

Key Solutions

Advanced Threat Simulation / Red Teaming

Advise | Implement

Simulates comprehensive cyberattack that tests the organization's prevention, detection, and response mechanisms and incorporates three core elements of security: physical, cyber, and human. The red team will perform realistic attack scenarios to achieve predefined objectives, using social engineering, phishing, physical penetration testing, and network exploitation.

Cyber Compromise Assessment

Advise | Manage

Examines an organization's network to identify potential compromised devices by monitoring for malicious network traffic and suspicious network activity.

Threat Readiness Advisory and Remediation

Advise | Implement | Manage

Helps most mature organizations deal with advanced threats guiding improvements of ROI on existing detection technologies. By improving interaction between systems, applying realistic use cases, and staff training.

Threat Intelligence and Analysis

Challenges

- Understanding the cyberthreat landscape is difficult as threats are continuously evolving.
- An integral approach to identifying threats requires significant resources to gather, filter, and interpret threat information from a wide variety of sources

Key Solutions

Cyberthreat Intelligence

Advise | Implement | Manage

Looks for potentially threatening events taking place outside the organization's perimeter and provides custom insights in line with the organization's strategic and intelligence requirements.

Implementation and Deployment

Implement | Manage

Through our partnerships with Sophos, Virsec, and Microsoft, we provide an all-encompassing specter of endpoint, network, and data security analysis software that the SOC can effectively leverage to manage, monitor, and analyze components

Threat Intelligence to Enhance your SOC

- 1 Organizations identify threats 10 times faster and resolve them 63 percent quicker using threat intelligence.
- 2 Threat intelligence enables security teams to identify 22 percent more threats before they become impactful.
- 3 Leveraging threat intelligence can save \$39,638 USD per team member per year.

Time threats are identified before becoming impactful (hours)

Time to resolve issues (hours)

Staff time cost for security resolution

Before TI	After TI	Difference	Benefit (%)
6	98.2	92.2	1,637
15.6	5.7	9.9	63
\$241,100	\$54,000	\$187,400	78

Threat Analytics

Key Differentiators

- With the IDC service-delivery model, organizations benefit from seamless integration with their vulnerability lifecycle management tasks.
- Our advanced services enable organizations to address emerging threats from new and disruptive technologies.
- We work with the latest open source and commercial technologies and can work with any technology an organization might already have deployed.

Identify the weakest link with IDC services

Cyber Risk Analytics

Challenges

The greatest challenge organizations face today is the sheer abundance of threats, which makes it difficult to focus on those that pose the highest immediate risk.

Key Solutions

Monitoring and Correlation

Manage | Implement

Enables organizations to view what is happening in cyberspace through advanced analytics. Either through monitoring and correlation of events, log collection with IDC Managed Security Services (MSS), or through Cyber Risk Analytics and behavior analytics tools deployed on-site

SIEM Intelligence

Advise | Implement

Improves SIEM services by assessing an organization's SIEM and analytics maturity and governance. We design a SIEM evolution roadmap, and design and develop use cases, as well as assist in SIEM provisioning.

Security Operations Center (SOC)

Challenges

Organizations need to develop their information security capabilities, to respond faster, work more efficiently, and protect their core business. To achieve this, it is imperative that they have a mature SOC capability.

Specialist skills and technology platforms are essential. Organizations often find it difficult to build, maintain, and resource a SOC.

Key Solutions

SOC Capability Design and Deployment

Advise | Implement

Assesses the people, process, and technology aspects of an organization's SOC. Uses industry best practices to design and deploy a tailored SOC solution. This enables organizations to identify and respond to the most severe threats they face.

SOC Cyber Security Dashboard

Advise | Implement | Manage

Defines and develops cyber risk metrics, indicators, and dashboards to provide insight into the operational effectiveness of the SOC.

Detection and Incident Response

We combine proven proactive and reactive incident management processes and technologies to rapidly adapt and respond to cyber disruptions whether from internal or external forces.

Cyber Incident Response

Challenges

Cyberthreats are constantly evolving and increasing in volume, intensity, and complexity.

It has become more likely that an attack can penetrate an organization's defenses and security controls. When this happens organizations must respond fast, thoroughly, and decisively

Key Solutions

Cyber Forensic Services

Advise | Implement | Manage

Investigates cybercrimes to determine the nature, extent, means, and origin of an incident. This supports organizations in any legal actions they may need to take

IT Resilience and Recovery

Advise

Provides support in enacting your contingency plans and returning technical operations to a normal state after a cyberattack or other disruption.

Key Differentiators

IDC's experience in incident and crisis management minimizes the time and resources needed to resolve an emergency.

IDC's understanding of business and risk allows us to respond to incidents from both a technical and a strategic perspective.

Software & Infrastructure Security

What We Provide

We safeguard your organization's infrastructure from a multitude of cyber threats. Our suite of advanced cybersecurity services covers every aspect of your organizational security needs, ensuring robust protection from network perimeter to web applications and data.

- With encryption solutions such as BitLocker and Galaxkey, we secure your sensitive data, both at rest and in transit, providing peace of mind against unauthorized access.
- Our cloud security offerings, leveraging Microsoft security suite, Virsec, and Sophos, protect your cloud environment from a wide range of threats, including malware, phishing attacks, and data breaches.
- Furthermore, our device management services ensure that all devices within your network are properly configured, monitored, and secured against potential vulnerabilities. With antivirus solutions like Microsoft Defender and network protection hardware from Sophos, we provide real-time threat detection and response capabilities, mitigating risks effectively.
- Through a combination of robust encryption, telemetry, automation, and other SOC tools, we offer end-to-end security solutions tailored to your organizational needs.

Posture & Risk Assessment

What We Provide

We ensure the security and resilience of your software applications against cyber threats. Our suite of advanced cybersecurity services provides comprehensive solutions to fortify your defenses.

- We leverage cutting-edge platforms like ImmuniWeb and Resecurity, our source code reviews meticulously analyze your codebase, identifying vulnerabilities and weaknesses that could be exploited by attackers.
- Our penetration testing services simulate real-world cyber attacks, uncovering hidden vulnerabilities and assessing the effectiveness of your security controls.
- Additionally, our maturity and risk assessments provide valuable insights into your organization's security posture, enabling targeted risk mitigation strategies. With our Vulnerability Assessment and Penetration Testing (VAPT) services, we ensure that your applications and infrastructure are resilient against potential threats.

Secure Development Operations

What We Provide

We help you enhance the security of software development lifecycle and streamline the process. Our suite of advanced cybersecurity solutions offers a range of services designed to fortify your defenses and improve efficiency.

- With automated testing, we conduct comprehensive security assessments of your applications, identifying vulnerabilities and weaknesses early in the development cycle.
- Our container security services ensure that your containerized applications are protected against threats, with robust security measures in place throughout the deployment process.
- By integrating security checks and tests into your Continuous Integration/Continuous Deployment (CI/CD) pipelines, we automate security processes, enabling rapid and consistent delivery of secure code.
- Embracing the Shift left approach, we shift security practices left in the development lifecycle, empowering you to detect and remediate vulnerabilities proactively.
- Additionally, our Security as Code and Compliance as Code services enable you to manage security policies and compliance requirements as code artifacts, ensuring consistency and scalability across your infrastructure.

Governance & Compliance

What We Provide

We ensure that your organization is compliant with industry regulations, standards and is aligned to your organization's security objectives.

- Through meticulous policy reviews, we ensure that your security policies are up-to-date and aligned with industry best practices.
- Our gap analysis identifies discrepancies between your current state and desired security objectives, guiding targeted remediation efforts to close these gaps effectively.
- We help you navigate the complex landscape of regulatory requirements and industry standards, ensuring that your organization remains resilient against cyber threats.

Managed Security Services

What We Provide

With our suite of advanced cybersecurity solutions, we offer cutting-edge capabilities to safeguard your digital assets effectively and streamline incident response processes.

- We use data-driven risk analytics to establishing a robust Security Operations Center (SOC), we provide the expertise and technology needed to stay resilient against evolving threats.
- Our Security Orchestration, Automation, and Response (SOAR) platform enables seamless coordination of incident response activities, improving efficiency and reducing response times.
- Our Threat Intelligence services deliver actionable insights into emerging threats, empowering you to stay one step ahead of cyber adversaries. We help you strengthen your cybersecurity posture and protect your organization's reputation and assets with confidence.

Continual Improvement

What We Provide

Our tailored services are designed to continually improving your organization's cybersecurity posture and fostering a culture of awareness among your employees

- Our team specializes in developing engaging awareness campaigns, multimedia content packages, and communication tools that resonate with your workforce, instilling a proactive approach to cybersecurity at every level.
- We offer a comprehensive range of training through on-site workshops as well; we provide continuous training opportunities to empower your employees with the knowledge and skills needed to detect and mitigate cyber threats effectively.
- With our focus on continual improvement and cybersecurity training and awareness, your organization will be better equipped to address evolving challenges and safeguard its valuable assets.
