PORTFOLIO

Key Case Studies

Case Study: Health Care Group – Integrated DMS

A private healthcare group with 4,500+ employees across 7 hospitals and 25 clinics needed a unified platform for managing clinical documentation and HR communications.

Facing fragmented document storage, difficulty managing guidelines and policy updates, and manual compliance tracking.

Challenge

- Scattered documents
- Manual compliance checks
- No central HR or communication hub

- **65%** faster policy updates
- Better employee engagement
- **99.8%** document compliance
- **50%** drop in HR queries

Solution

- Modern intranet and document system
- Automated policy workflows
- Integrated employee portal and learning systems

Technologies

Case Study: Global Logistics & Supply Chain – Integrated DMS

A global logistics company with 8,000+ employees across 20 countries faced inefficiencies due to decentralized document storage and siloed tools.

Poor coordination and the absence of a unified communication platform hindered cross-functional collaboration.

Challenge

- Local file storage and duplicates
- Poor internal communication
- Compliance risks

Solution

- Centralized SharePoint-based DMS
- Automated workflows for document alerts and reviews
- Modern intranet with multilingual support

- **30%** faster customs processing
- No duplicate documents
- **90%** employee engagement
- Better customer satisfaction

Technologies

IDC and Al Nabooda Affinity Program for Enterprises

OPPORTUNITY

- **Automate Affinity Program:** Implement an automated system for the Affinity program to generate opportunities and deliver tailored offers to enterprise customers.
- **Data-Driven Strategy:** Develop a data-driven Affinity program to enhance revenue and increase new car sales.
- **Revenue and Sales Boost:** Utilize the Affinity program to drive higher revenue and stimulate new car sales.
- **Impact Analysis:** Use data to analyze and understand the Affinity program's impact on new car sales.

SOLUTION

- **Digital Transformation:** Create a digitally transformed experience through a user-friendly, approval-based web application using WordPress CMS to support the Affinity program.
- **User Management:** Implement admin features for efficient user management, including roles and permissions.
- **Offer Management:** Enable the creation, publication, and modification of offers through the admin interface.
- **Real-Time Insights:** Provide real-time insights and analytics reports to monitor the program's performance and impact.
- **Customization and Personalization:** Develop capabilities to tailor offers and communication to the specific needs and preferences of customers.

BUSINESS OUTCOMES

- **Increased Revenue:** Achieve a 20% increase in revenue from new car sales through targeted offers and promotions within the Affinity program.
- **Higher Customer Engagement:** Attain a 30% improvement in enterprise customer engagement rates as measured by participation in the Affinity program and interactions with personalized offers.
- **Improved Conversion Rates:** Boost conversion rates by 25% for leads generated through the Affinity program, translating into a higher number of new car sales.
- **Enhanced Customer Retention:** Achieve a 15% increase in customer retention rates among enterprise customers participating in the Affinity program, as tracked by repeat purchases and continued program participation.

TECHNOLOGIES USED

OPPORTUNITY

The business challenge expressed was to make the organization digitally transformed by implementing the SAP™ Business ByDesign®

Our qualified resources engaged in planning, designing, developing, and implementing various work packages associated with the modules outlined below:

- Finance, Accounts, & Taxation
- Human Resource Management
- Business Development and Sales
- Procurement
- Store Management
- Project Management
- Reporting & Analytics

SOLUTION

1. Streamlining financial processes, ensuring accuracy and compliance.
2. Implementing a centralized accounting system for real-time financial insights.
3. Designing a comprehensive HR module for employee lifecycle management. Automation of payroll, benefits administration, and talent acquisition processes.
4. Integrating sales processes to improve forecasting, order fulfillment, and customer satisfaction.
5. Developing a centralized procurement system for efficient vendor management. Automating purchase requisition, order processing, and inventory management.
6. Developing customizable dashboards for real-time business intelligence. Incorporating advanced analytics tools for trend analysis and forecasting.

BUSINESS OUTCOMES

1. Reduced manual intervention in finance, HR, procurement, and other processes, resulting in time and cost savings.
2. Improved data quality enhances decision-making and reduces the risk of errors in financial reporting and other critical areas.
3. **Efficient lead management** and CRM contribute to increased sales effectiveness.
4. Cost analysis tools help in optimizing procurement decisions

Case Study | Etihad

TECHNOLOGIES USED

OPPORTUNITY

1. A leading enterprise in the aviation sector faced challenges in optimizing their SAP landscape, aligning it with their evolving business needs, and ensuring the seamless operation of critical business processes.
2. Recognizing the need for specialized SAP resources, they sought a trusted IT service provider to enhance their SAP capabilities and support ongoing digital transformation initiatives.

SOLUTION

1. As a premier IT service provider specializing in SAP solutions, we identified the unique requirements of our client and proposed a comprehensive resource augmentation strategy. Leveraging our extensive pool of SAP experts, we meticulously matched their needs with a tailored team of highly skilled professionals across various SAP domains, including SAP HANA, BASIS administration, ABAP development, Fiori, Business Warehouse, Finance, HCM, and more.
2. Our approach focused on quality, expertise, and strategic resource allocation. We employed a rigorous recruitment process, emphasizing SAP certifications, industry experience, and deep expertise in SAP HANA, ensuring our resources were well-equipped to address the client's specific challenges.

BUSINESS OUTCOMES

1. Achieved a 95% satisfaction rate in resource quality and expertise, as measured by client feedback surveys.
2. **Implemented KPIs to measure candidate performance, focusing on project delivery timelines, issue resolution time, and adherence to best practices.**
3. **Demonstrated deep expertise in SAP HANA**, resulting in a 30% improvement in data processing speed and real-time analytics capabilities.
4. Reduced system downtime by 15% through proactive monitoring and issue resolution, enhancing overall system reliability.
5. Achieved a 25% improvement in system performance metrics, leading to faster response times for critical business transactions.

Case Study | MSIG

TECHNOLOGIES USED

OPPORTUNITY

SAP support projects are one of the most important aspects of any organization's IT infrastructure. Without a well-organized and managed SAP support project, organizations would be unable to effectively utilize their SAP systems and gain the maximum benefit from them.

The Client needed to deal with SAP-related issues across Singapore. Below were the detailed activities:

- System Health Checks
- Data Patches
- Deployments
- Debug Access
- Partner API Deployment
- SAP Incidents.

SOLUTION

1. IDC Technologies helped the client by having a separate skilled SAP Support team spread across the region to attend all the calls on time to meet the SLA defined by the client.
2. The solution for the SAP Support project involved establishing a robust and responsive support framework to address any system-related issues, ensuring continuous system availability and optimal performance.
3. Regular system health checks, user training, and documentation updates were conducted to enhance overall system reliability and efficiency.

BUSINESS OUTCOMES

1. We provided comprehensive support for SAP modules, and minimized system downtime, ensuring uninterrupted business processes.
2. Improved productivity and streamlined workflows across various departments.
3. Enhanced the system's performance, optimizing response times and overall user experience.
4. We mitigated risks, reducing the likelihood of critical errors and potential disruptions through proactive issue resolution and regular system health checks

Case Study | Vupico

VUPICO

TECHNOLOGIES USED

SAP Business Intelligence

OPPORTUNITY

The existing manual process of generating reports using Excel spreadsheets from various SAP Reports and external data sources is identified as inefficient.

- 1.Improved Data Visualization: The primary objective is to enhance data visualization through Power BI.
- 2.Alignment with Data-Driven Decision-Making: The project reflects a commitment to promoting data-driven decision-making within TRM.
- 3.Operational Efficiency and Effectiveness: The successful implementation of these improvements is expected to contribute to increased operational efficiency and effectiveness.

SOLUTION

1. The proposed solution involves a comprehensive overhaul of the current manual report generation process within the TRM KPI Dashboard Project.
2. We aimed to streamline data retrieval and processing, addressing the existing inefficiencies associated with Excel-based reporting.
3. Developed eight additional reports, each tailored to specific aspects of maintenance and operations that are meticulously designed to enhance user-friendliness and provide meaningful visualizations for maintenance users and operations managers.

BUSINESS OUTCOMES

1. The implementation of the second phase of the TRM KPI Dashboard Project by IDC Technologies represents a significant step towards optimizing data-driven decision-making within Vupico's TRM.
2. Streamlined data retrieval and processing through the development of eight additional reports.
3. The project enhanced the user-friendly visualization of the reports for maintenance users and operations managers. This strategic initiative aligns with best practices in data visualization and reporting, fostering increased operational efficiency and effectiveness.

OPPORTUNITY

BUSINESS NEEDS

The client was looking for building a platform based smart mobile app that will hosts common business services such as port application approvals, senior management notifications etc. enabling Omni-channel capabilities by consolidating the existing MRP and Channel specific Middleware

The client was looking to accelerate ITS innovation strategy by converting their monolith middleware into containerized microservices. Client was completely on-premises, looking for a way to move toward their cloud-first strategy

SOLUTION

OUR SOLUTION

IDC helped the client by strangulating existing monolithic application into unique microservices that allowed smart approval workflows.

MEASURABLE OUTCOMES

- Usage of API Gateway for governed service access from all channels (internal/external) brought unified standardization.
- Realtime curated data was consumed from EDP and Data science models via REST API's.
- Fault tolerant and scalable, customized platform leads to higher reliability and faster delivery.

BUSINESS OUTCOMES

IMPROVED OMNICHANNEL EXPERIENCE

- Increased Customer Interactions for Senior management and above
- Insulates changes to backend systems and enabled reliable delivery
- Reduced time to market
- 10% reduction in cost for release of new features.
- Canary and feature flagging leads to testing in production.
