Welcome to IDC Digital

Empowering Digital Evolution: As the leading digital and technology division of IDC Technologies, we empower organizations to flourish in the digital era with the latest innovations and solutions.

IDC Digital's comprehensive suite of end-to-end digital and smart services addresses all traditional and transformational needs. We are a one-stop IT Service Provider for accelerating your business objectives using best-in-class consulting & technology solutions.

IDC Digital | Our Offering Stack

Business Challenges

TECHNOLOGY ADVANCEMENTS

Modernizing the application allows organizations to stay current and competitive in their industry.

PERFORMANCE & SCALABILITY

Enhance the application which can improve its performance and scalability, allowing it to better meet the needs of users.

ENHANCING SECURITY

Strengthening the security of applications and protecting data sensitivity at multiple layers by using a modern framework.

REDUCING MAINTENANCE COSTS

Cost optimization by offloading infrastructure provisioning and maintenance to cloud provider.

Our Strength

IDC's Global Application Modernization Services allow organizations to capitalize on their existing application investments, maximize IT budgets and minimize the risk of adopting new technologies.

With expertise in DevOps, cloud services, data platforms, and proven modernization strategies, IDC helps organizations achieve their business objectives quickly, lower costs and stay within budget while creating high-quality, innovative digital experiences.

We implement strategies and solutions that keep on-premise infrastructure in sync with cloud platforms. Our comprehensive cloud services include design, proof of concept, and testing to ensure a successful migration to the cloud.

Our Industry Agnostic Offering is:

- ✓ Certified Cloud Architect Team
- ✓ Strategic partnership with Leading cloud Providers
- ✓ Standardized across the world
- ✓ Expertise across multiple technologies
- ✓ Global Presence
- ✓ State-of-the-art tools & systems
- ✓ Application Managed Services

•Legacy App Modernization

•Cloud Migration

•Cloud Native App Development

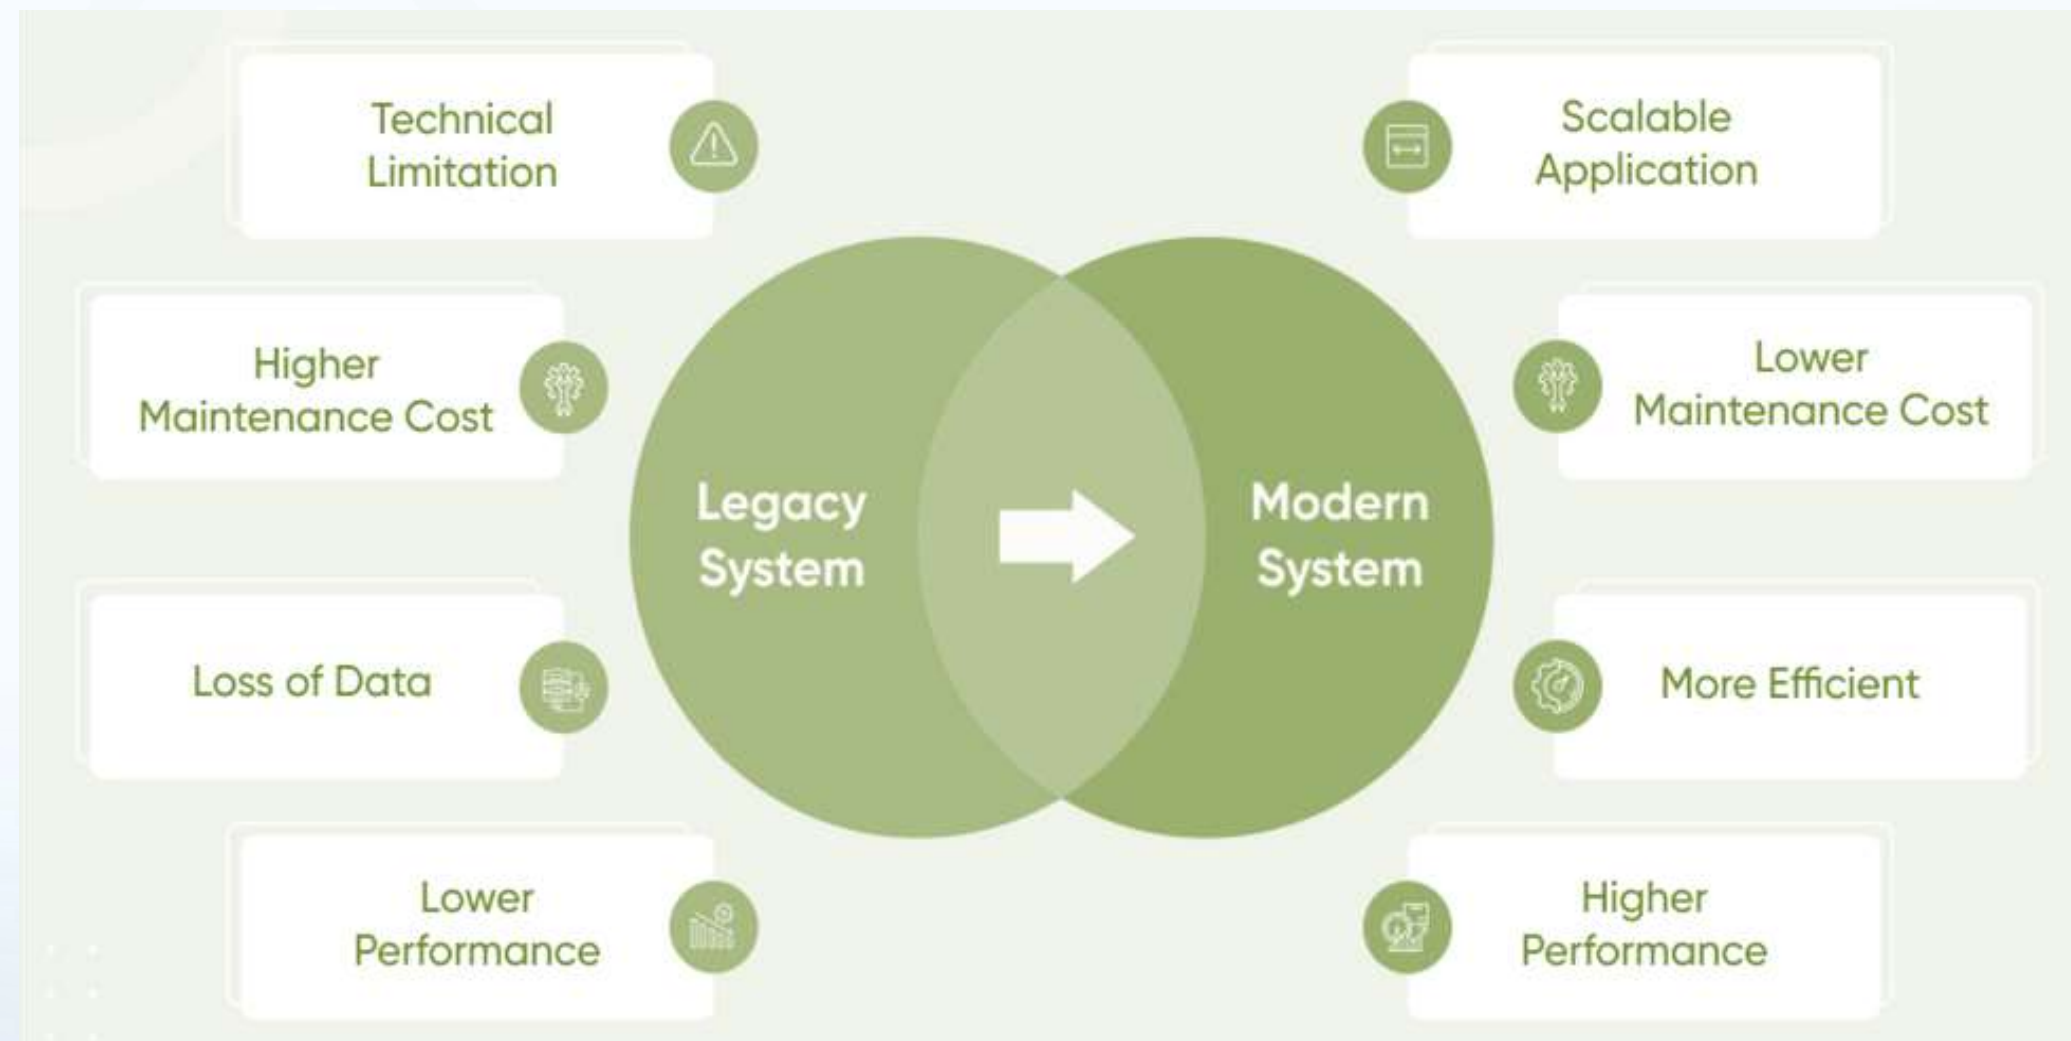

•DevSecOps

•Automation

•UI/UX Engineering

IDC Offering – App Modernization

IDC offers a range of services for modernizing applications, including a comprehensive approach that addresses both the backend functionality and user experience. IDC helps move legacy workloads to a modern cloud platform and break down large, monolithic applications into smaller microservices, using modern methodologies such as DevOps, Site Reliability Engineering (SRE), and CI/CD as part of the modernization process.

IDC Offering – App Modernization

IDC Technologies is well-versed in Agile-based deliveries. We will use an Agile/iterative approach to app modernization and project management(if required) that will help teams deliver value to their customers faster.

UNDERSTAND

- Define the who?
- Meet with Business Sponsors
- Understanding of Legacy System
- Killer Feature/ Capabilities
- Success Criteria for the week

SKETCH

- Prioritized concept ideas and themes
- Define User personas
- Define solution for modernization
- First draft wireframes/mock-ups

DECIDE

- Choose the best idea
- Storyboards/ refined wire-frames
- Business Blueprint / Architecture Blueprint
- Conceptual Architecture

IMPLEMENTATION

- Design Execution
- Risk & Assumptions
- Integration
- Data / Code Migration
- Deployment

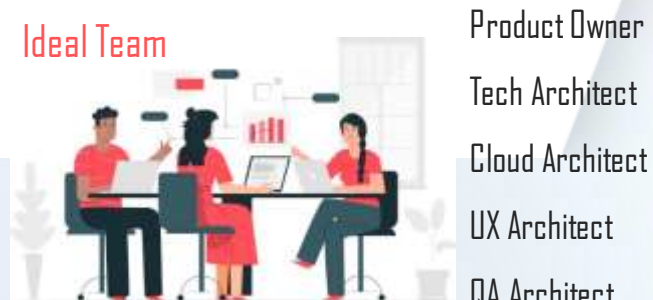

VALIDATE

- Refined execution ready for test
- Present Product Vision
- Validate Commercials
- Training and Support

Output

Buy-in from Business on Product Vision

Product Owner
Tech Architect
Cloud Architect
UX Architect
QA Architect

App Modernization – Our Services

Microservices:

IDC modernizes applications by implementing microservice patterns. This involves breaking down a monolithic application into smaller, independent "microservices." Each microservice is a small, specialized unit of functionality, making it easier to maintain and update, compared to a large monolithic application. Additionally, microservices can be scaled individually, rather than scaling the entire application, resulting in more efficient resource utilization and improved performance.

DevOps:

IDC implements DevOps automation by utilizing tools such as Jenkins or Terraform to automate repetitive tasks such as testing, deployment, and infrastructure provisioning. This enables organizations to quickly and dependably roll out new features. IDC also employs advanced deployment techniques like Rolling updates, Canary Releases, and Blue-Green to achieve zero downtime during deployment.

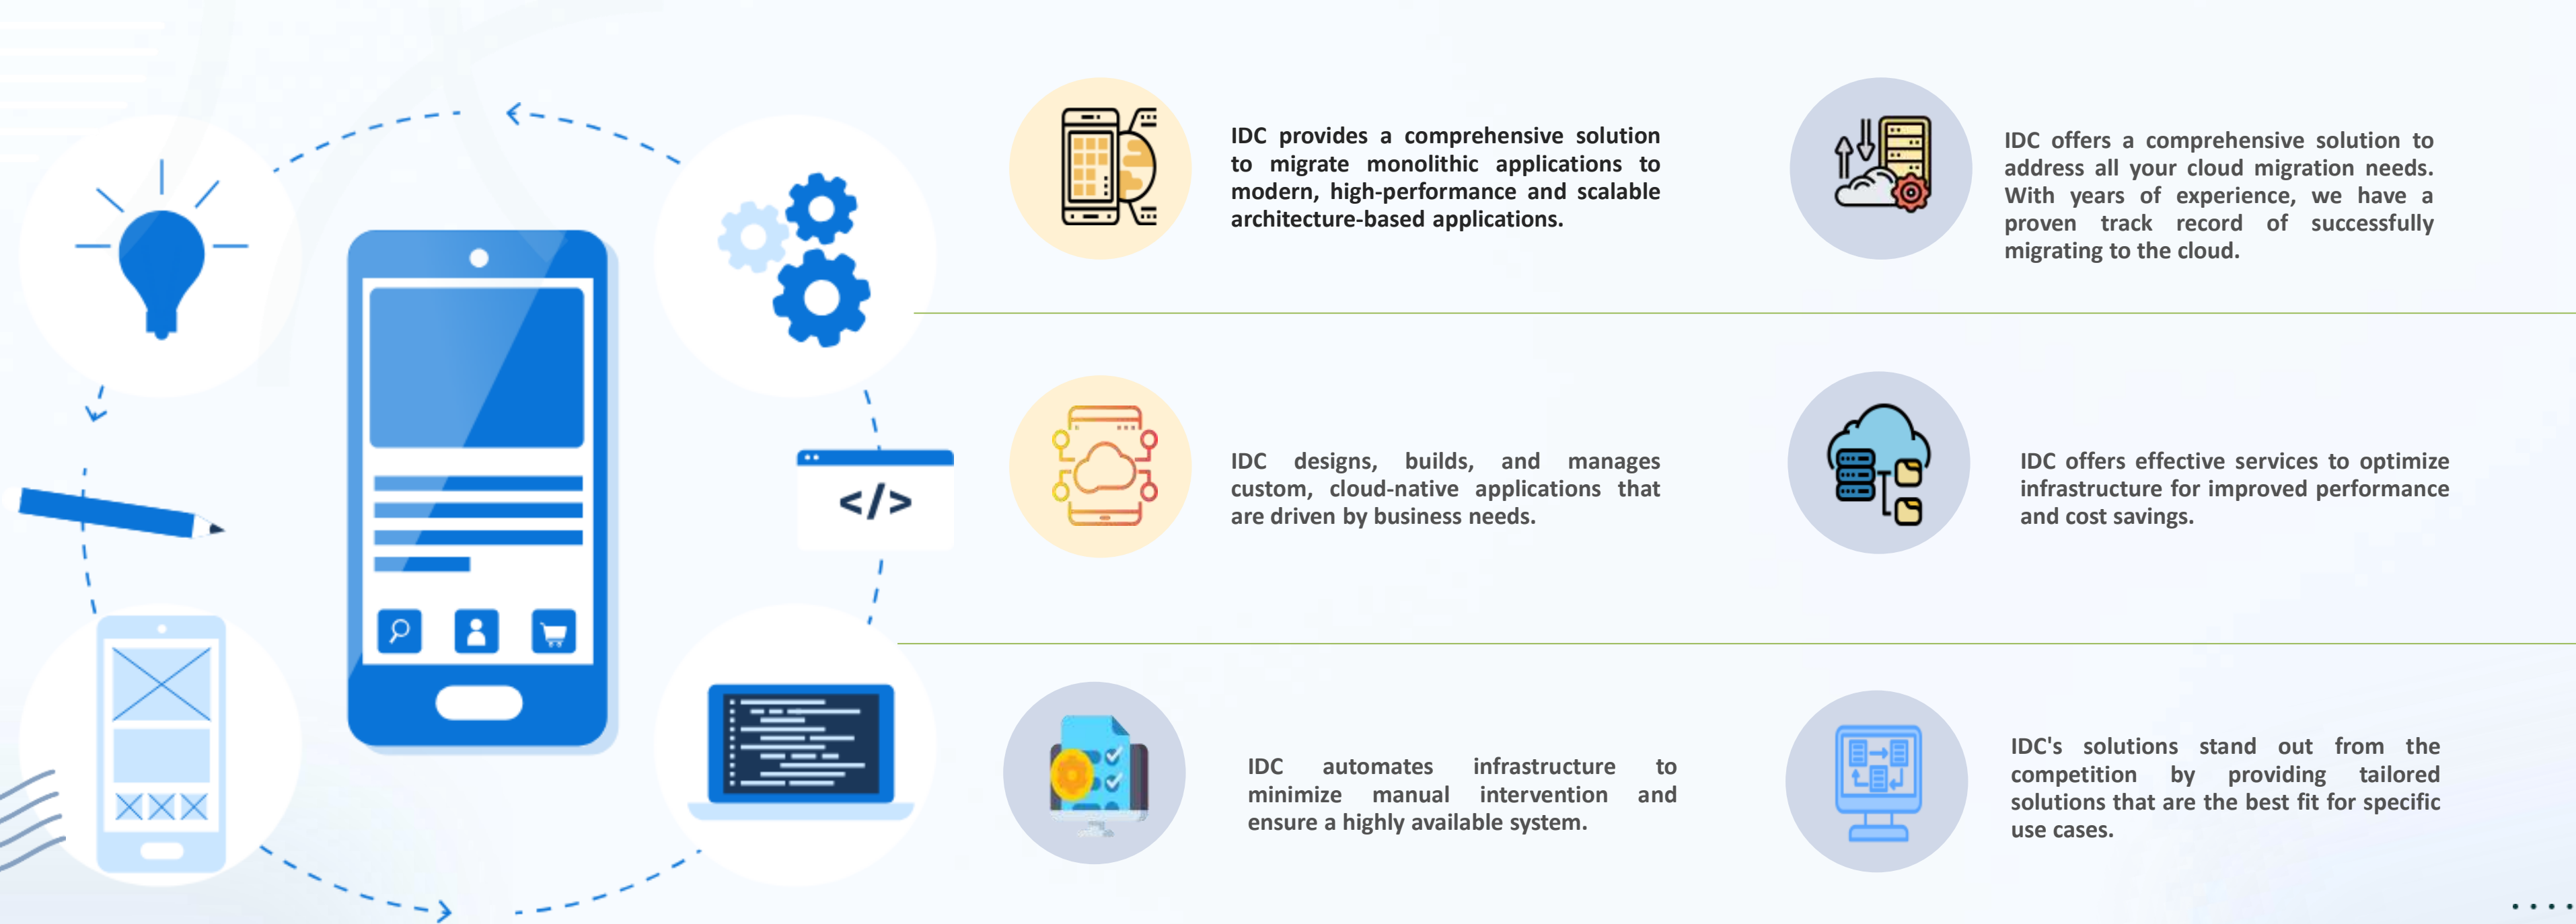

Containers:

IDC modernizes applications by utilizing a containerization approach, which allows them to run on any platform that supports containerization technology, without concerns about dependencies or system configuration. IDC employs various container runtimes such as Docker, and CIR-O, as well as multiple container orchestration tools such as Kubernetes and OpenShift.

Data Modernization:

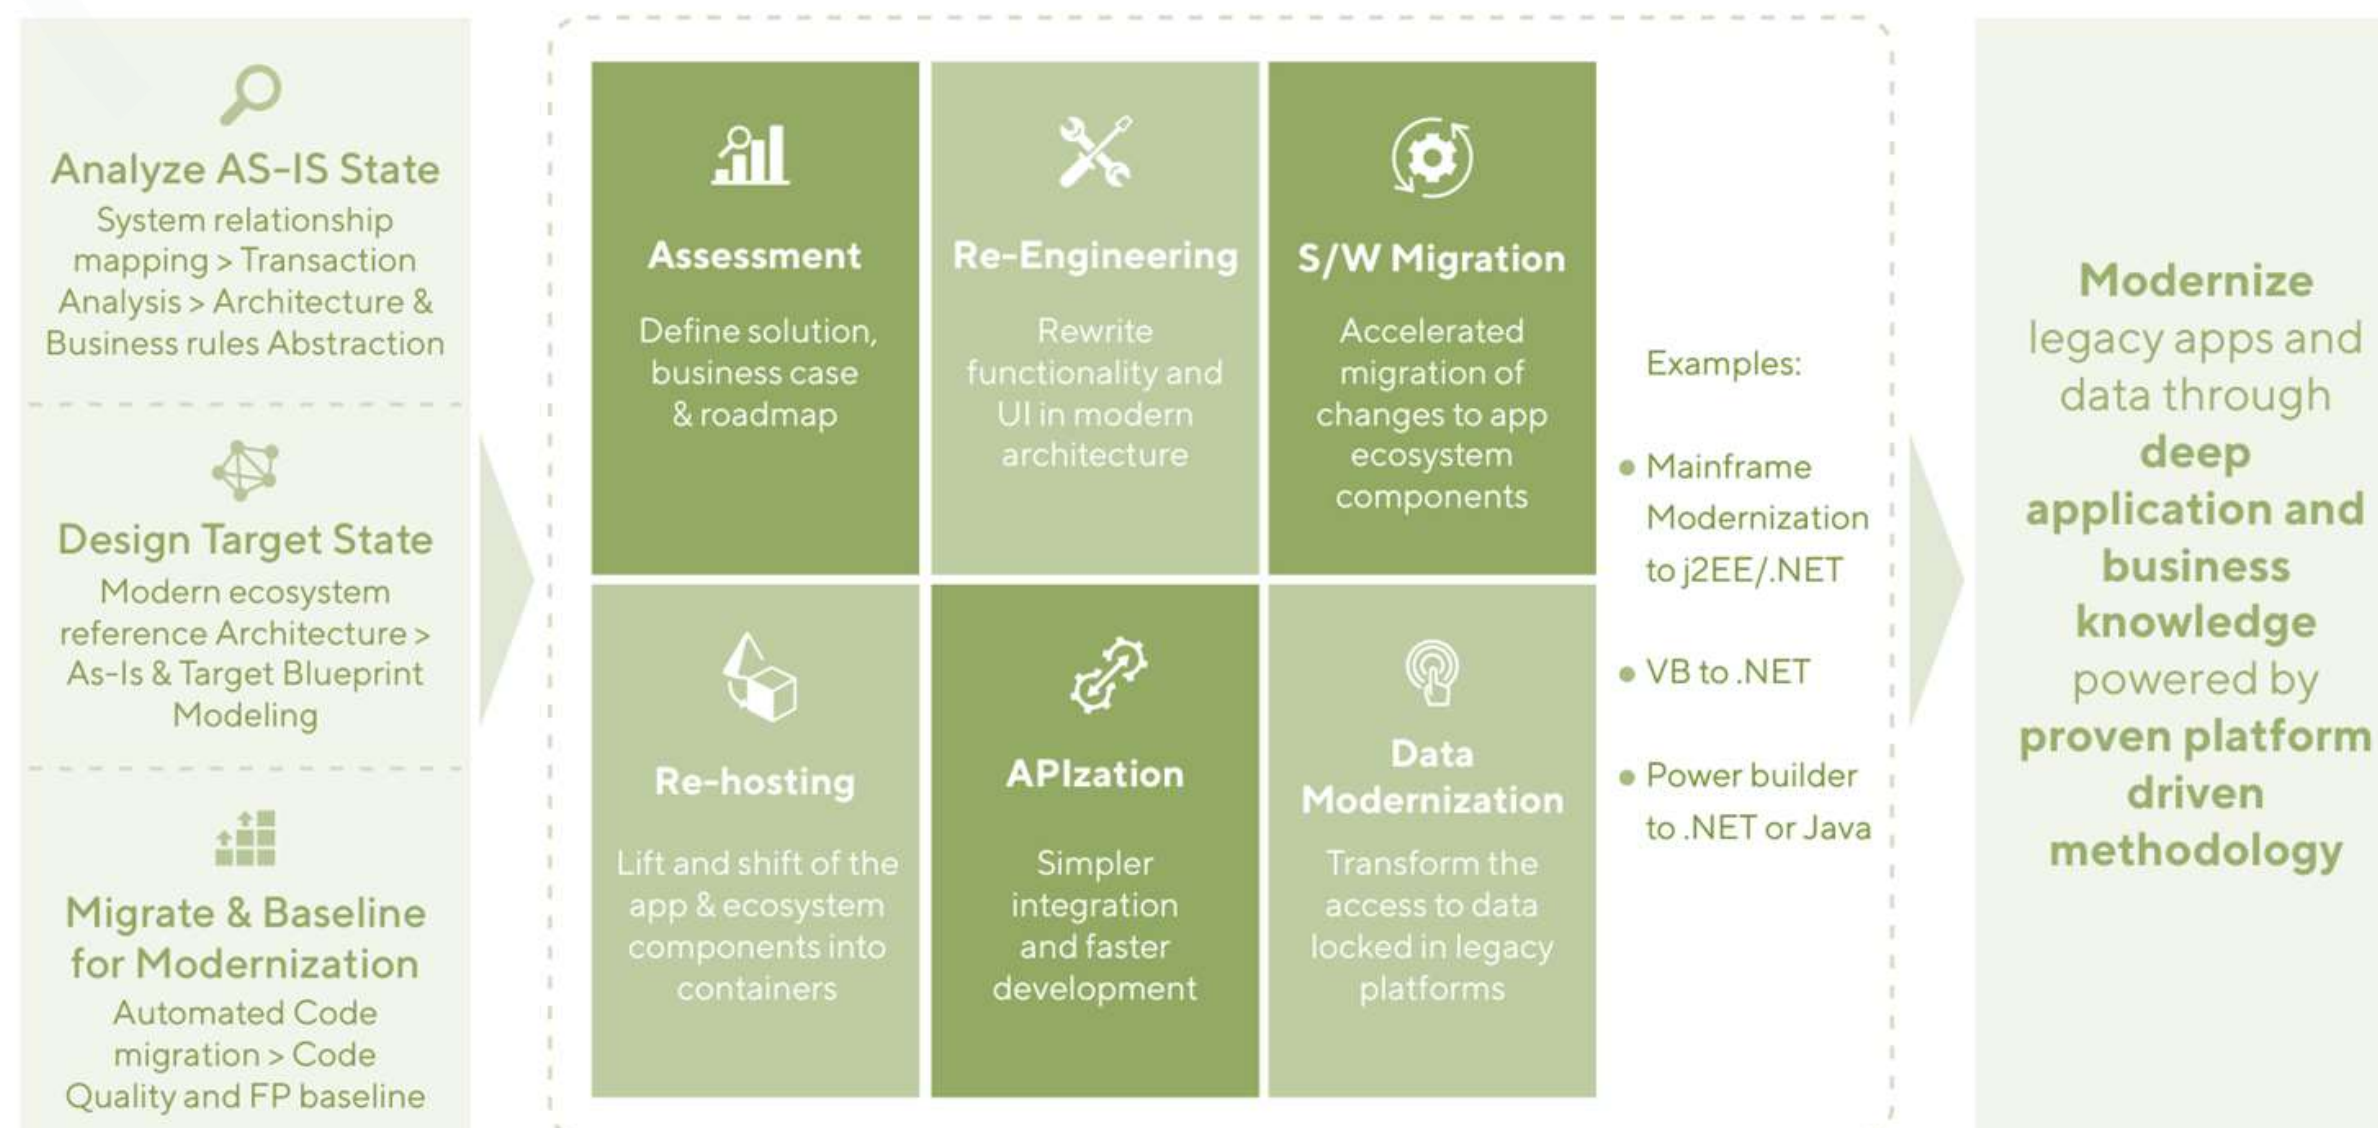

IDC modernizes data for both SQL and No-SQL databases by synchronizing, replicating, and transferring data. We ensure that replication on the platform continues to function seamlessly after migration. IDC also migrates data from on-premises RDBMS to Cloud RDBMS and performs transformations from RDBMS to No-SQL.

App Modernization Solution

Platform Driven Methodology for Accelerated Outcomes

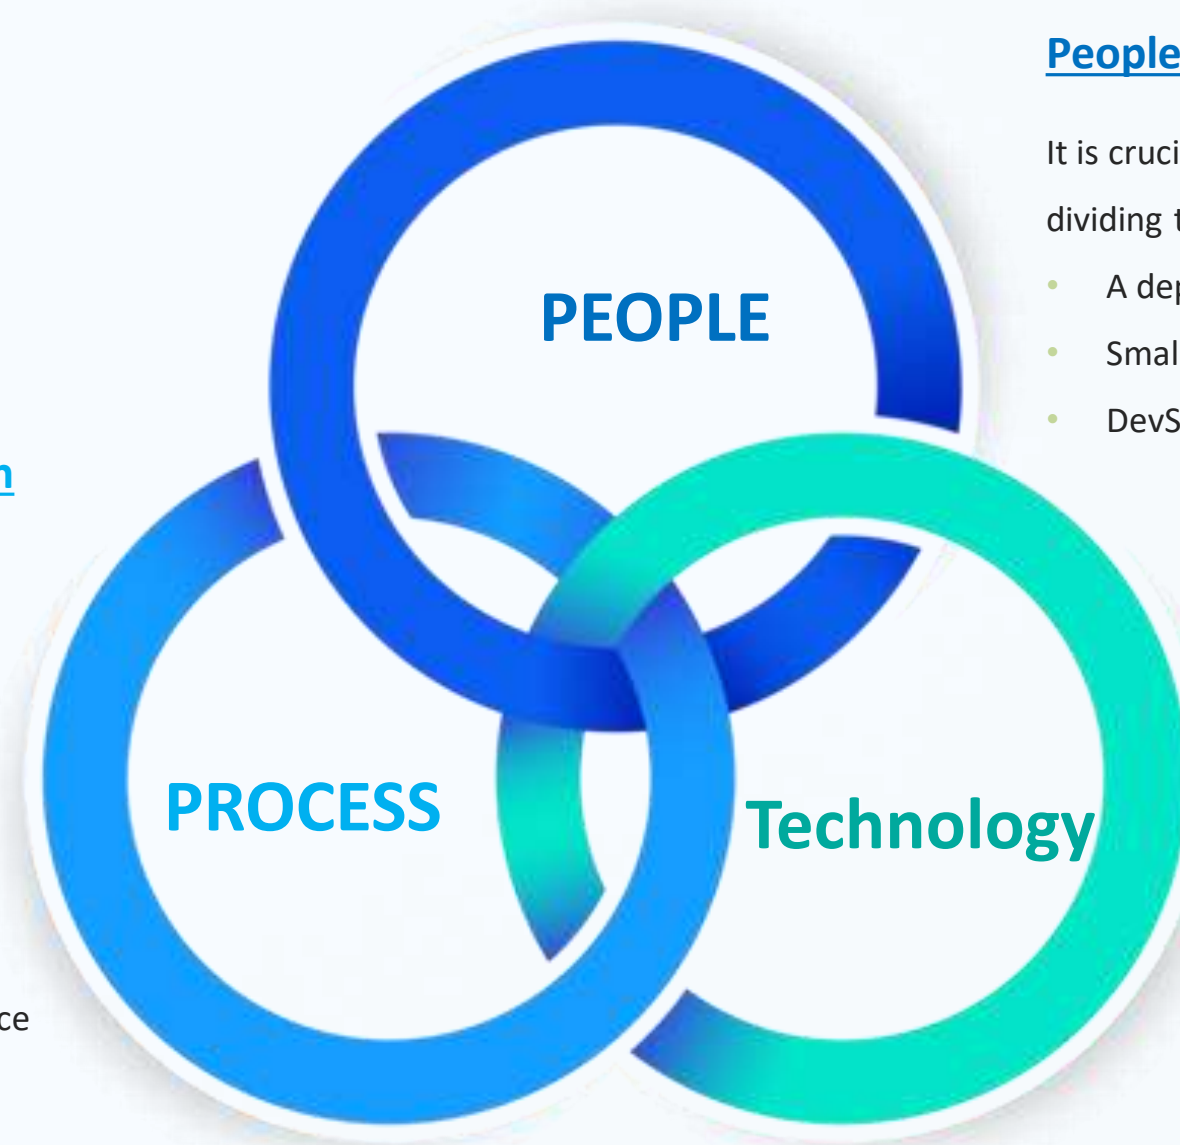

Modern ecosystem reference framework," built from our extensive experience in modernization projects, to create a customized digital transformation plan tailored to the client's needs. Our platform-based approach, implemented through a streamlined factory model, guarantees an optimal outcome for each application upon completion. Our services include Re-hosting, Re-engineering, APIzation, Software Migration, Data Modernization, and Optimization.

Application Modernization Features

Process: Automate the interaction between people and technology

- IDC conducts an application portfolio assessment to prioritize applications for modernization and determine the most effective migration strategies.
- We also establish application archetypes, recurring patterns that serve as a reference for other applications with similar characteristics within the organization.

People: Optimize human systems

It is crucial to establish teams that support the delivery of value streams, rather than dividing the value stream across departments based on functional roles.

- A department of developers, testers, operators
- Smaller teams with tight interlinkage are higher functioning
- DevSecOps integrates security throughout the development cycle

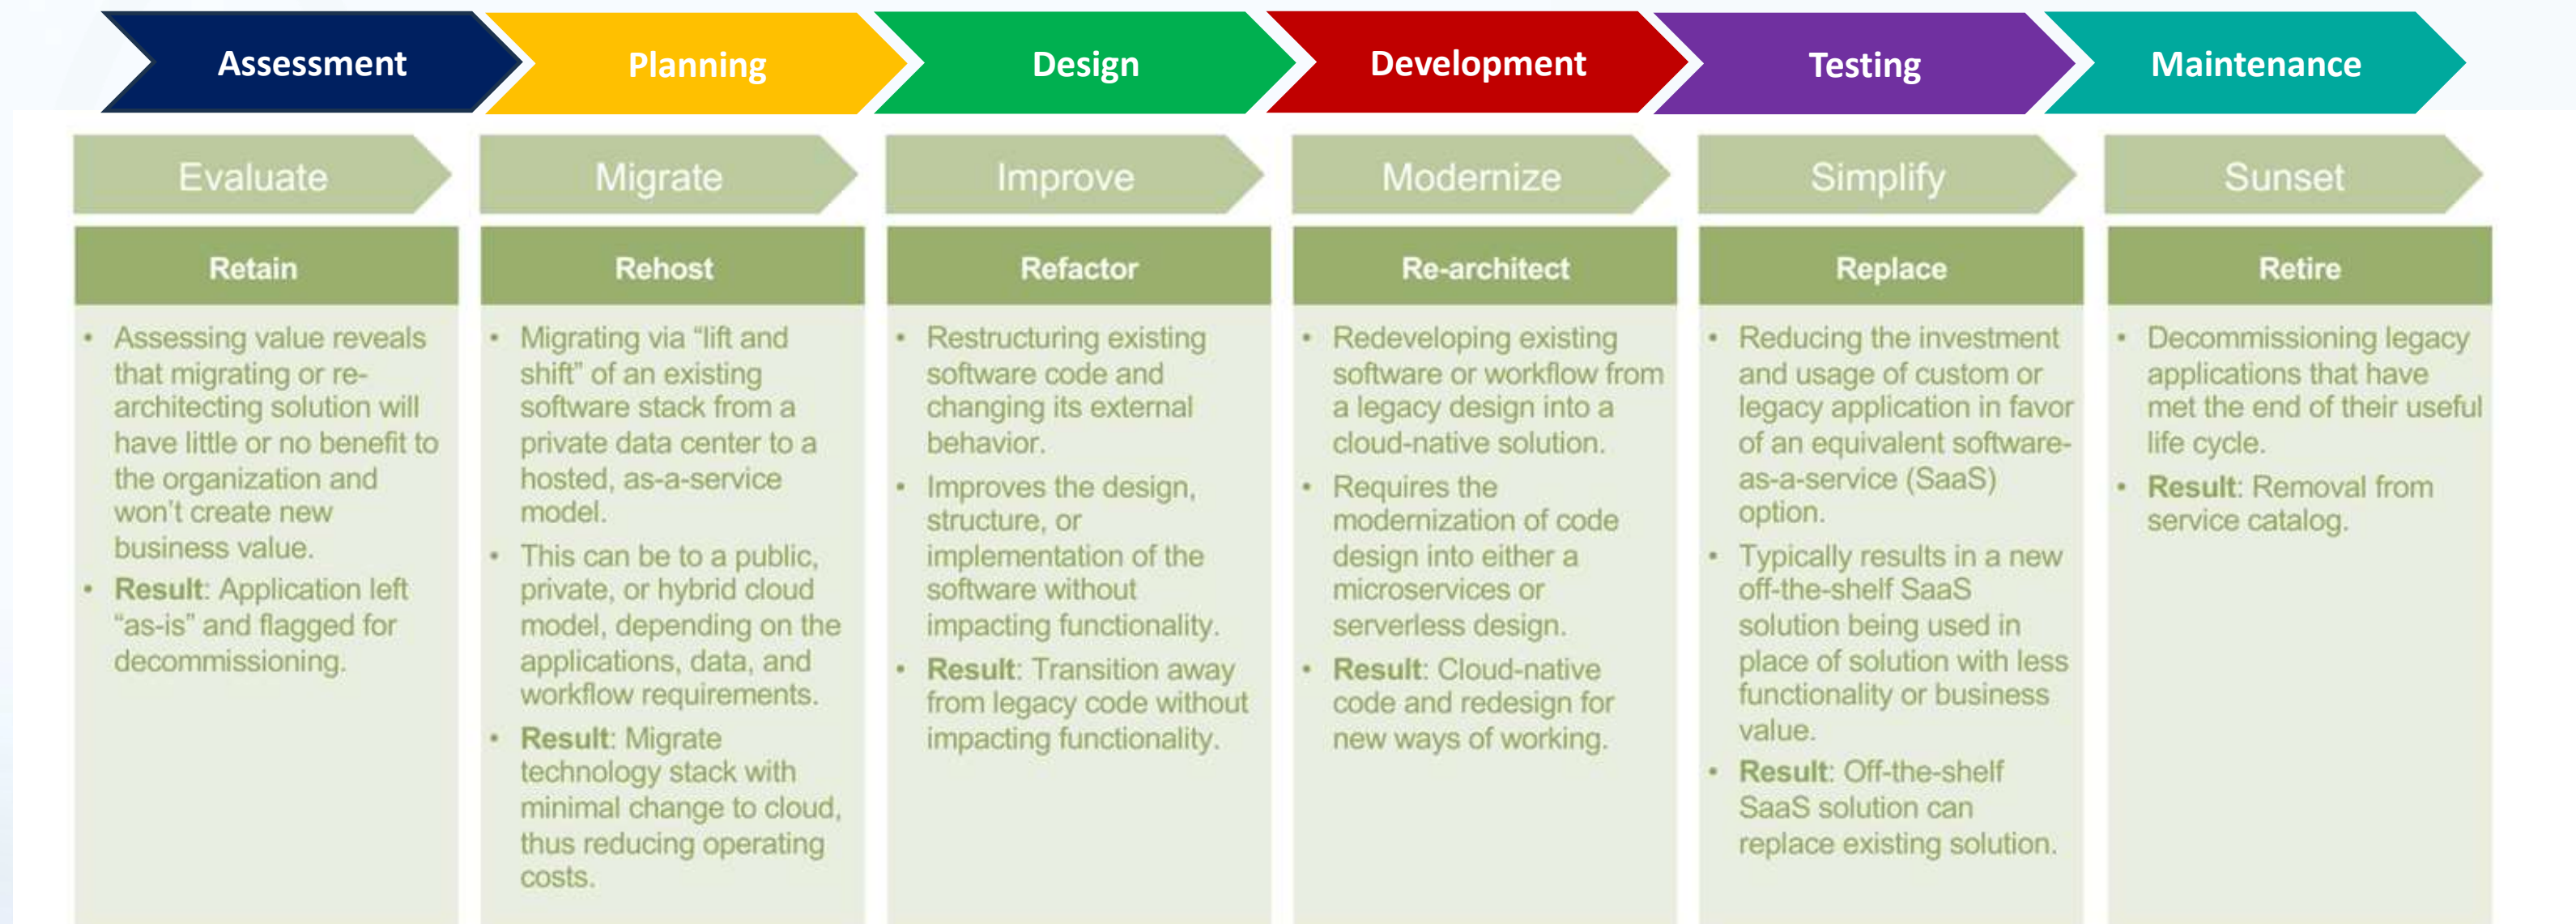

Technology: Support modernization

- IDC offers a self-service model for Kubernetes or containerized applications, which creates a more agile and responsive environment that allows for faster release of new features and services to better adapt to rapid market changes and customer needs.

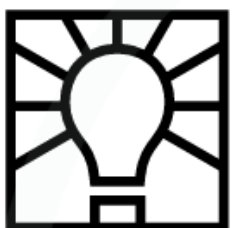

How we deliver Application Modernization

Before beginning the application modernization process, IDC conducts a requirement-gathering session to gain a deeper understanding of the current system, followed by an assessment that collects information on each component in the system.

We then analyze the input received during the assessment, and subsequently, commence the implementation of the application modernization.

Agile Transformation Squads

Solutioning

With a thorough understanding of our clients and the ability to solve complex problems; create (technical) solutions; re-imagining the possible.

Orchestration

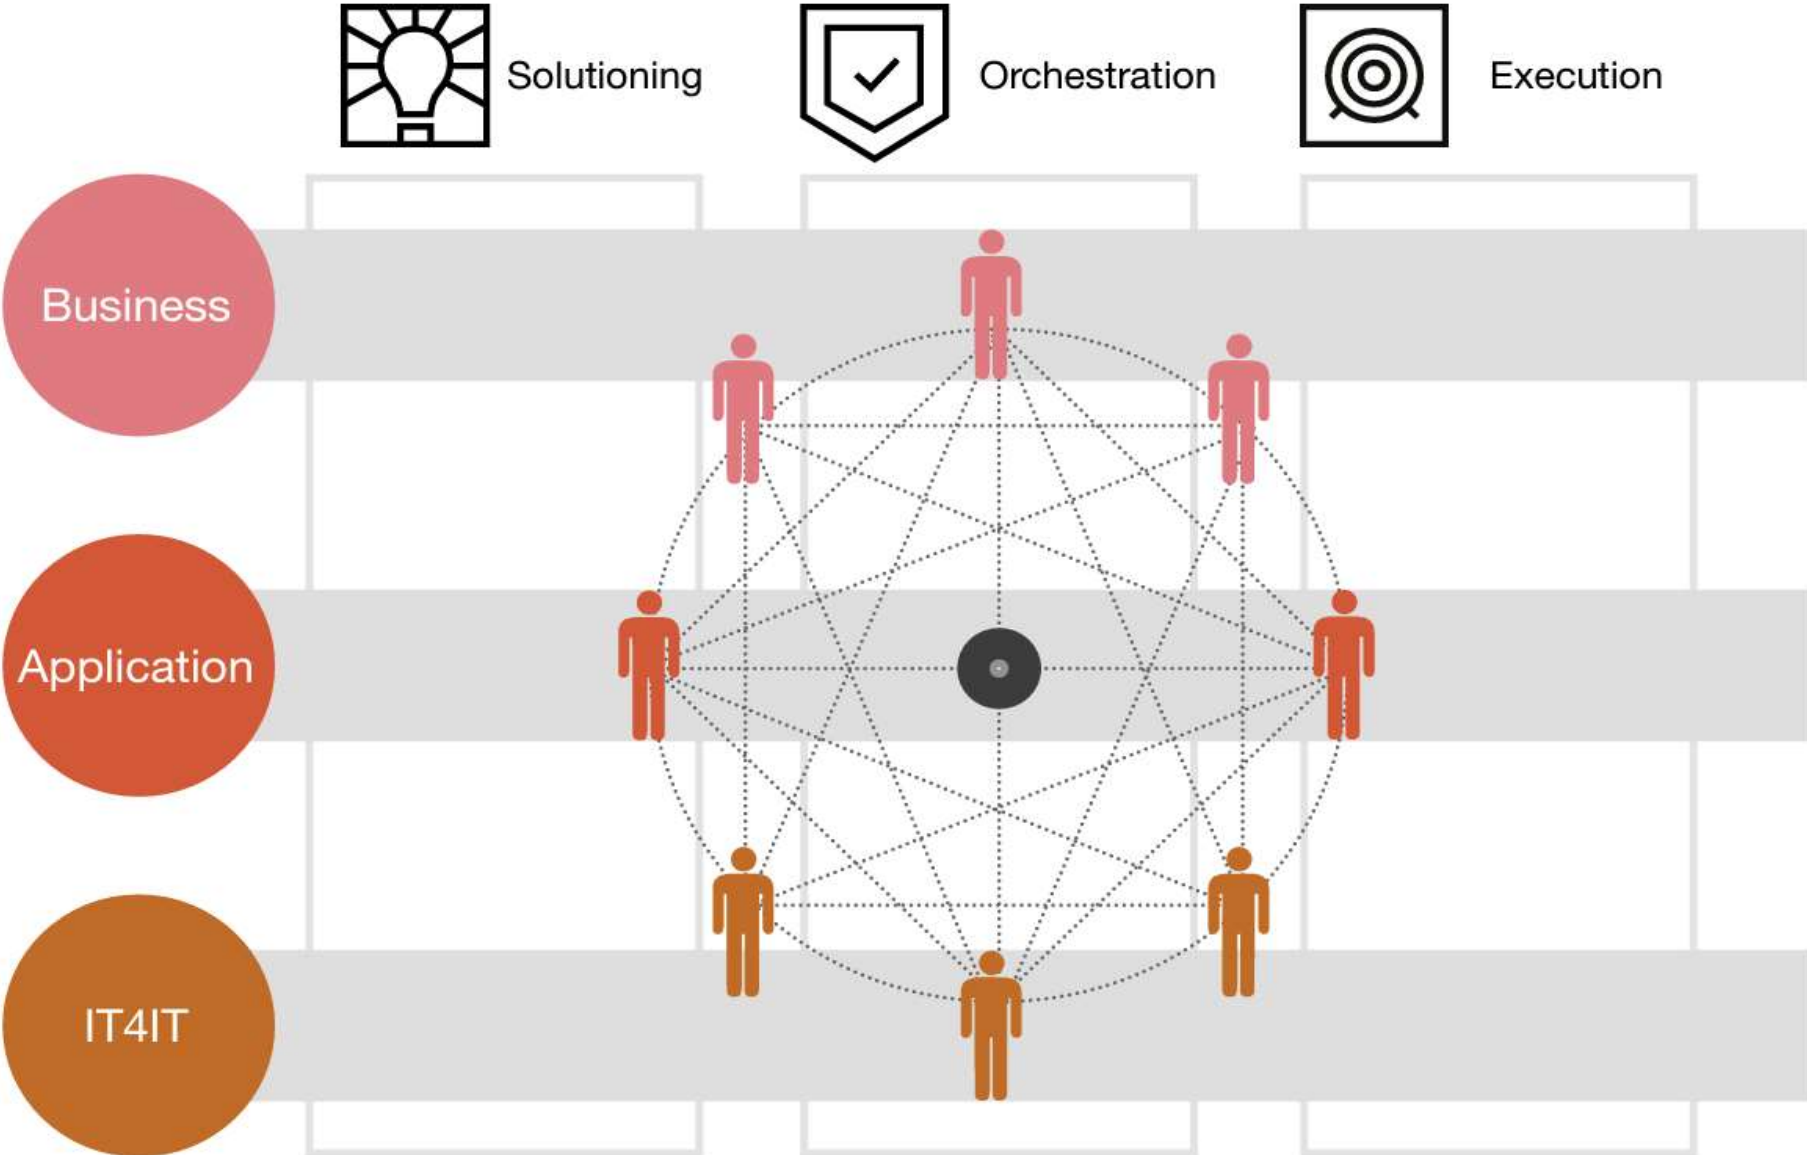

Able to orchestrate decision-making by navigating corporate politics throughout the full spectrum of stakeholders (C-Suite to engineer); also creating business cases and roadmaps.

Execution

Driving execution of initiatives through strong (agile) program management skills with a strong focus on outcomes: having a solid vision, but striking a delicate balance with being agile. Although we will not be coding, we will fire start and drive your initiative.

Dimensions in Large Transformation

In addition to these capabilities, it is important to cover all aspects from strategy to infrastructure, in order to fully support these legacy transformations. Next to aligning with the more obvious IT skills in the application layer and understanding your IT4IT, it is also crucial to align these IT capabilities with the businesses these capabilities are designed to support. In quite a lot of situations you will need to have a fully functional roadmap, with an alternative platform for every single piece of functionality, and put this on the backlog of business.

Agile Transformation Squads

App Modernization: Hamriyah Free Zone Authority Sharjah Government

The Objective

The client aimed to develop a smart, platform-based mobile application designed to host a range of essential business services. The app's key functionalities included features like port application approvals, real-time senior management notifications, and other critical operational workflows. This solution was envisioned to streamline processes, enhance decision-making efficiency, and provide a unified digital experience for all business stakeholders.

Business Need

The client was looking to accelerate ITs innovation strategy by converting their monolith middleware into containerized microservices. Client was completely on- premises, looking for a way to move toward their cloud-first strategy.

The client was looking for building a platform based smart mobile app that will hosts common business services such as port application approvals, senior management notifications etc.

The IDC Solution

IDC helped the client by strangulating existing monolithic application into unique microservices that allowed smart approval workflows.

- Usage of API Gateway for governed service access from all channels brought unified standardization.
- Realtime curated data was consumed from EDP and Data science models via RESTAPI's.
- Fault tolerant and scalable, customized platform leads to higher reliability and faster delivery.

Key Benefits

- Increased Customer Interactions for Senior management and above
- Insulates changes to backend systems and enabled reliable delivery
- Reduced time to market
- 10% reduction in cost for release of new features.
- Canary and feature flagging leads to testing in production.

Design & Develop software for NSE Parivartan Portal

The Objective

The client WIPRO sought IDC as a partner to develop software for NSE Parivartan Portal.

Business Need

The client was looking to accelerate ITs innovation strategy by converting their manual process into digitally automated Portal involving Key stakeholders like Listing Compliance and Member Compliance for Statement of Deviation & Variation, Insurance Submission and Base Minimum Capital.

The IDC Solution

IDC helped the client by strangulating existing monolithic application into unique microservices that allowed automated workflows by following SonarQube Standards.

- All manual checks / validations and processes involved are automated for entire process.
- Technical Design document, Development and Unit testing is successfully covered for Insurance Submission, BMC and Statement of Deviation & Variation process.

Key Benefits

- Parivartan Portal which will be largely digital thereby eliminating manual tracking of Mails to ANMI and BBF Insulates changes to backend systems and enabled reliable delivery.
- Simplify data check within the application digitally.
- Automate the manual check process.
- Full project life cycle ownership: successful project delivery including full implementation from initiation to deployment for one major or several minor initiatives simultaneously.

CI and CD pipeline.

Loan Origination System Development

The Objective

To develop a robust loan origination system that would enhance operational efficiency, improve customer satisfaction, and reduce the turnaround time for loan approvals.

Business Need

A financial institution identified a significant opportunity to streamline and automate their loan origination process. The existing manual process was time-consuming, error-prone, and led to delays in loan approvals, resulting in a suboptimal customer experience.

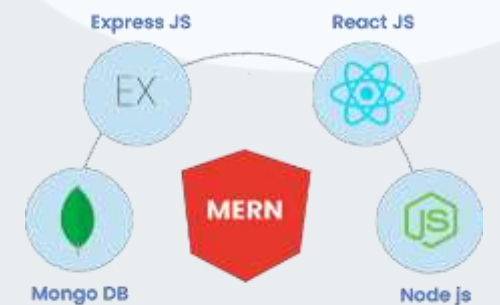

The business opportunity was to develop a robust loan origination system that would enhance operational efficiency, improve customer satisfaction, and reduce the turnaround time for loan approvals.

The IDC Solution

We developed a comprehensive software tailored to the needs of the financial institution. The solution leveraged modern technologies and best practices to automate the loan origination process.

- Captured and validated applicant information, supporting various types of loans.
- Incorporated credit scoring models and algorithms.
- A centralized repository to manage documents.
- A seamless collaboration and communication.

Delivery

- **Accurate Credit Risk Assessment:** Integration with credit bureaus and advanced credit scoring models enhanced the accuracy and consistency of credit risk assessments.
- **Regulatory Compliance:** The software ensured compliance with regulatory requirements and facilitated smooth adherence to industry standards. Comprehensive audit trails and reports helped the financial institution meet regulatory obligations and simplified regulatory reporting.

Sahatna Mobile App Development

The Objective

To provide a comprehensive, user-friendly digital platform that empowers individuals to take control of their healthcare journey by streamlining access to essential healthcare services, information, and support in a secure and convenient manner.

Business Need

The client seeks an innovative solution to simplify healthcare processes, improve patient engagement, and ensure seamless communication between patients and healthcare providers. The app addresses the growing demand for accessible healthcare services, telehealth capabilities, and proactive health management tools in a connected and digital-first world.

The IDC Solution

Cloud-Based Microservices Architecture: Ensures scalability, high availability, and seamless integration with external healthcare systems like EHR/EMR for secure data exchange.

Mobile Application: A user-friendly app enabling patients to schedule appointments, access health records, track medications, and connect via telehealth services anytime, anywhere.

Admin Portal: A centralized platform for healthcare providers to manage appointments, monitor patient data, and send timely notifications for improved operational efficiency.

Delivery

- **Accurate Credit Risk Assessment:** Integration with credit bureaus and advanced credit scoring models enhanced the accuracy and consistency of credit risk assessments.
- **Regulatory Compliance:** The software ensured compliance with regulatory requirements and facilitated smooth adherence to industry standards. Comprehensive audit trails and reports helped the financial institution meet regulatory obligations and simplified regulatory reporting.

Thank You
